No. 227. SEPTEMBER 1921

THE INTERNATIONAL TEXTILE EXHIBITION

under auspices of The Textile Exhibitors' Association, Inc., opens in Mechanics Building, Boston, October 31, and continues through the week. We have secured the same space occupied by our company during several previous textile machinery exhibitions and shall be glad to welcome our friends through the week of October 31 to November 5 inclusive.

We also extend a cordial invitation to visit our works at Hopedale during the above week

Hopedale is located in a triangle formed by lines connecting Boston, Worcester and Providence. It is about 34 miles from Boston, 18 miles from Worcester and 28 miles from Providence.

To reach Hopedale from Boston, take Boston & Albany division of New York Central R. R. to Milford, Mass., our adjoining town, thence by carriage or electric cars to Hopedale, one and one-half miles; or Boston & Worcester trolley line to South Framingham, 22 miles, and trolley from South Framingham to Hopedale, thirteen and one-half

miles; or Boston & Albany line to South Framingham and trolley to Hopedale.

From Worcester take either Boston & Albany train, or trolley, to North Grafton, 6 miles, thence change to trolley line through Upton to Hopedale, 12 miles.

From Providence take Providence & Worcester division of N. Y., N. H. & Hartford R. R. to Uxbridge, Mass., 25 miles, thence trolley to Hopedale, 7 miles. Or, Providence & Worcester R. R. to Woonsocket, R. I., 16 miles, thence by trolley to Milford, Mass., 12 miles, changing at Milford for Hopedale. Or, trolley from Providence to Woonsocket, connecting with trolley line at Woonsocket for Milford, as above.

We are also easily reached by automobile by good highways from all directions.

In view of requests for information as to location of Hopedale, we have had a special map prepared which shows towns in vicinity of Hopedale and with special marks to locate the several towns and cities above mentioned.

At the Textile Machinery Exhibition we expect to show in operation eight Northrop Looms, one spooler and one twister. The looms will be shown on a wide range of fabrics, including worsted dress goods, fancies, gingham stripes, sateen, print cloth, Terry towels, light duck and broad sheetings.

There will be warpers with and without balling attachments; also a general display of spinning and twister spindles and rings, loom temples, bobbin holders, spooler guides, etc.

Our exhibit will be in charge of the people connected with our selling department who will take pleasure in showing our products and in meeting the many visitors of the occasion.

Our illustration on page four shows another yard full of old common looms broken into pieces of suitable size for the foundry. These remains represent what were several thousand common looms and which we have replaced with the same number of Northrop Looms.

DO NOT FORGET THAT NORTHROP LOOMS

on goods that can be woven with one shuttle make better goods and more of them at less than half the Labor cost of weaving.
